What is 5G marine network & how does it work?

In Ningde, China Mobile and Huawei have built a showcase 5G marine network to provide coverage up to 50 km offshore. The network employs tall radio masts transmitting over a mixture of frequency bands, supplemented by network technologies and techniques designed to optimise coverage at sea.

How does a 5G network work?

The network employs tall radio masts transmitting over a mixture of frequency bands, supplemented by network technologies and techniques designed to optimise coverage at sea. The two companies are using 700 MHz spectrum for the foundation network, supplemented by 5G services at 2.6 GHz and 4.9 GHz for greater capacity.

How will 5G help China's offshore wind turbines?

In the energy sector, 5G could be used to bring connectivity to China's 14,000 offshore wind turbines, which are on average 22 km offshore. Furthermore, 5G could be the basis for an integrated marine emergency command information system to support rescue operations.

What is 5G in Ningde & Fujian?

In Ningde, Fujian Province, China Mobile and Huawei have built a pilot maritime 5G network that stretches 50 km out to sea and is supporting law enforcement, fishing, tourism and energy applications, as well as consumer services.
