There are approximately 75 green hydrogen projects proposed in Chile across all stages of development, including seven commercially scaled plants currently undergoing an Environmental ...

A combination of characteristics makes Chile a potential leader in the production of green hydrogen in Latin America and the Caribbean (alongside Brazil and Colombia).

These targets leverage Chile's exceptional solar and wind resources, projected to deliver the lowest global levelised cost of green hydrogen by 2030 estimated at USD 0.8/kg in the north and ...

Abundant solar radiation in the Atacama Desert and powerful Patagonian winds in the Magallanes region make Chile a prime location for green hydrogen production.

Chile possesses exceptional natural advantages for renewable energy production. In the north, the Atacama Desert boasts the highest solar radiation levels, making it an ideal location for ...

AES Andes operates a diversified fleet across Chile, Colombia, and Argentina, spanning thermal generation, wind, solar, and storage assets. Since launching Greentegra, the company has ...

With high solar radiation and onshore winds, Chile's geography provides both renewable energy opportunities and challenges. The country's greatest solar resource lies in its far north in the ...

The Atacama Desert provides the world's highest solar radiation levels, allowing energy production that exceeds 2,800 kWh/m² annually. Meanwhile, southern regions such as Biobío and Magallanes are ...
