Liquid-applied membrane (LAM) is a monolithic, fully-bonded, liquid-based coating suitable for many waterproofing and roofing applications. The coating cures to form a rubber-like elastomeric ...

Cementitious waterproofing is the most common and economical method of waterproofing used in construction works. The materials are readily available and can be mixed and ...

Cementitious waterproofing is the easiest method of waterproofing in construction. The materials for cementitious waterproofing are readily available from suppliers of masonry products.

High-performance double-component polyurea waterproof coating by YURU. UV resistant, chemical resistant, durable for roofs, bridges, tunnels, and pools.

Summary: Discover why sealing gaps in double-glass units is critical for energy efficiency and structural integrity. This guide covers proven methods, material comparisons, and real-world case studies to ...

Setseal R : specially formulated single component cementitious crystalline capillary waterproofing system consisting of a blend of cement, fillers, and multiple activating chemicals.

Double glass components, widely used in solar panels, building-integrated photovoltaics (BIPV), and electronic displays, require robust waterproofing to prevent moisture ingress.

Double glass components use thermal insulation principles to create a moisture-resistant barrier. The air gap between glass layers acts like a thermal blanket, preventing condensation - the silent killer of ...
