Recycling and recovery of materials from PV modules at the end-of-life is an industry at its initial stages. The energy transition is contributing worldwide to reducing greenhouse gas emissions, ...

Discover the state of solar panel manufacturing in Europe, the challenges posed by imports, and what EU countries are doing to rebuild local production. Learn how European-made solar can boost ...

EU manufacturers of solar panels are swiftly going out of business, as cheaper Chinese imports outcompete them. The European solar industry is collapsing despite the EU's energy ...

Cheap solar panels from China are flooding the market and this is challenging Europe's lead in the global move to green energy. As of February 7, 2024, the issue has gotten critical.

Solar energy, in particular photovoltaics (PV), is currently the fastest growing renewable energy source in the EU. Last year, 56 GW of solar PV were installed in the EU, two thirds of it on rooftops, ...

There has been little light relief for European manufacturers of solar panels over the past few years. A glut of cheap Chinese solar panels triggered a flurry of factory closures,...

The current crisis is mostly the result of different factors: 1) a dependence on Chinese solar panel prices, 2) a lack of European production capacities, and 3) high production costs.

Europe must urgently reclaim its solar manufacturing capabilities through innovation, strategic collaboration, and bold policy action, or risk losing energy sovereignty.
