Discover how Uprise Energy built the world's first mobile 12kW wind turbine--solving remote power for farms with a portable system that replaces diesel generators.

Wind power stations are facilities that generate electricity by harnessing wind energy through the use of wind turbines, as evidenced by the increasing capacity of such stations in various regions, including ...

Power generation from wind and solar power plants is clearly on the rise. These plants feed direct current - which must pass through an inverter - into the grid, but the conversion causes considerable ...

Wind power is a sustainable, renewable energy source, and has a much smaller impact on the environment than burning fossil fuels. Wind power is variable, so it needs energy storage or other ...

Direct drive wind turbines represent a significant advancement in wind energy technology. Their inherent reliability, reduced maintenance, and higher efficiency make them a compelling option for both ...

Wind turbines can provide electricity for industrial facilities, such as manufacturing plants, food processing plants, and oil-and-gas operations. These wind turbines are behind the customer's meter, ...

A wind turbine works by catching the energy in the wind, using it to turn the blades, and converting the energy to electricity through a generator in the part of the turbine called a nacelle. While some ...

When wind speeds are moderate, the wind turbine offsets some or all of the home's electricity. When it is very windy, the wind turbine produces more electricity than the home uses, so excess electricity is ...
